

Making a spending plan enables you to control your money instead of it controlling you.

Step 1: Look at your income

- Note dates that income will be received in the "pay days" column on the Spending Plan Worksheet on page 2.
- Enter your monthly net income (after taxes) from all sources in the "monthly total" column (jobs, alimony, child support, social security, welfare, unemployment, disability, rental income, etc.).
- For income received infrequently, estimate yearly total then divide by 12, then enter that total into the monthly total column.
- In the "periods 1-4" columns record which week of the month the income will be realized. This will later be used to ensure that your income will be available to meet your estimated expenses for each week.
- Move totals down to the Summary section of the Spending Plan.

Step 2: Make a spending plan

- Note the due date of each expense.
 - Estimate each expense category as accurately as possible in the "monthly total" column. There are 3 types of expenses:
 - **Fixed Expenses** normally stay the same each month and must be paid to maintain essential goods or services such as: rent/mortgage, car payments, and insurance payments.
 - Variable Expenses are usually paid each month, but you have some control over the amount spent as: food, personal care, and clothing. Estimate the monthly expenditures as accurately as possible, or figure the monthly average by taking your total annual expense and dividing by 12.
 - **Periodic Expenses** (*) don't occur every month such as: car repair/maintenance, taxes, and medical expenses. These expenses can catch you by surprise and wreak havoc with your Spending Plan, so set money aside for them every month. Take the entire projected yearly amount and divide by 12.
- Record which week of the month the expense will be due in "week 1-4" columns. Ensure expenses are evenly distributed within columns. If expenses are too high during one week move them to another so that there will be enough income in that week to cover the expenses.
- Move totals on to the Summary section of the Spending Plan.

Step 3: Include your debt and credit obligations

- List all of your non-mortgage debt payments not included elsewhere in your Spending Plan including credit cards, student loans, lines of credit, bank loans, etc. Note the total debt and then the monthly payment for each.
- Move the total of B to the Summary section of the Spending Plan. Move the total of A to the liabilities section of the Balance Sheet on page 5.

Step 4: Sum it all up

- Add your monthly expenses and your monthly debt payments to determine your total monthly expenses.
- Determine your monthly balance (+) or deficit (-) by subtracting your monthly expenses from your income.
- If you have a positive monthly balance—congratulations! Set some new financial goals and work them into your spending plan.
- If you have a monthly cash shortage, start with the variable expenses and review your spending plan to determine where you can cut back your expenses.

Spending Plan Worksheet

Are Your Finances in Balance?

Your monthly salary and your installment loans are only a part of your total financial picture. To determine your Net Worth, subtract your total liabilities (what you owe) from your total assets (what you own).
